Procedure

Melt A at 80-85°C without overheating it in a double jacketted tank. Heat B at 80-85°C. Emulsify A into B at 80-85°C. Add C at around 60°C. Leave to cool slowly so that the MONTANOV does not form crystals. Add the constituents of D at around 40°C.

Comments

MONTANOV 202	A glucolipid emulsifier of vegetable origin. It produces very evanescent emulsions which are easy to apply to the skin and are rapidly absorbed leaving a soft, non-greasy feel.
SEPILIFT DPHP	A lipoaminoacid containing hydroxyproline in a lipophilic form. Because of its anti-elastasic properties it helps fight against skin ageing.
SEPIGEL 305	An stabilising and thickening agent in a liquid, very easy-to-handle form. It requires neither premixing nor neutralisation.
SEPICIDE HB / CI	A preservative system.
