Procedure

Melt fatty phase A at 80°C. Emulsify A into hot water (C). Allow to cool. Separately disperse xanthan gum (B) and add B to the emulsion. At 40°C introduce sodium lactate and adjust pH to 5 with lactic acid. Then homogenize while progressively incorporating SIMULGEL NS which stabilizes the given foam. Add fragrance.

Comments

MONTANOV 68 Glucolipid emulsifier in harmony with nature. It can be used to formulate rich, smooth textures with any type of oil phase. MONTANOV 68 can promote liquid crystals according to the emulsion diagram, creating water reservoirs within the emulsion to help maintain skin moisturization. MONTANOV 68 offers the possibility to formulate without additional stabilizers.

SIMULGEL NS Thickening and emulsifying agent in very easy to use liquid form (no pre-dispersion or neutralization). Provides a sensation of freshness followed by a melting effect on contact with the skin. It leaves a feeling of velvety softness. SIMULGEL NS perfectly stabilizes emulsions against high temperatures.

SEPICIDE HB Preservative.
