Weigh phase A and pour it into the vat, heat to 80°C with stirring (anchor). Mix phase B, heat to 80°C. When both phases are at 80°C, pour B over A slowly (3 minutes introduction time) under turbo 1 (700 rpm). When B is poured increase turbo 2 (1500rpm) + anchor agitation. Cooling will be accelerated after 50' of emulsification. Total duration of emulsification: 1 hour. After this time, cooling can continue under anchor.
